## SUMMARY

Backend Software Developer with 2.5+ years of experience building scalable, event-driven microservices in the fintech domain using Java 21, Spring Boot, Apache Kafka, PostgreSQL, MySQL, Redis, and AWS. Owned business-critical platforms across loan collections and repayments, including a loan restructuring orchestration service, a rule-driven waiver engine, and a collections CRM backend. Recipient of the mPokket **Visionary Innovator Award** for delivering the Part Payment feature and contributing to a Lift & Shift migration that reduced infrastructure cost by ~20%. Strong in distributed systems, workflow orchestration, system design, and cross-team technical ownership.

## SKILLS

**Languages:** Java, Python, SQL  
**Frameworks & Backend:** Spring Boot, Spring Security, Hibernate, JPA, REST APIs, Microservices, Apache Kafka  
**Databases & Caching:** PostgreSQL, MySQL, Redis  
**Cloud & DevOps:** AWS (EC2, S3, Lambda, CloudWatch), Docker, Kubernetes, CI/CD, SonarQube, Git, Maven  
**Core Concepts:** Distributed Systems, Event-Driven Architecture, Workflow & Saga Orchestration, Idempotency, Dead Letter Topics, API & Event Contract Design, Observability, System Design

## EXPERIENCE

- mPokket**  
Software Developer

Bengaluru, India  
Oct 2024 – Present

  - Designed, developed, and owned scalable backend microservices using Java 21, Spring Boot, Kafka, PostgreSQL, MySQL, and Redis in the loan collections and repayments domain.
  - Architected and delivered the Loan Restructuring orchestration platform, consolidating multiple active loans into a single restructured loan through a Kafka-driven workflow spanning six downstream systems.
  - Delivered key backend enhancements for the Part Payment feature, enabling a high-impact business capability with measurable product value; awarded the **Visionary Innovator Award** for the contribution.
  - Played a significant role in the Lift & Shift migration of the Collection Module, Admin API, and Salaried services to new infrastructure, contributing to a ~20% reduction in infrastructure cost.
  - Building an AI-powered chatbot for overdue loan customers that delivers instant waiver recommendations and streamlines repayment journeys, improving collections efficiency and customer experience.
  - Drove production deployments, incident resolution, and monitoring of backend services in a high-volume fintech environment.
- Webveins Media**  
Software Developer Intern

Mumbai, India  
Apr 2024 – Aug 2024

  - Developed user authentication, task creation, task allocation, and progress tracking features, improving workflow organization and visibility.
  - Worked on prompt engineering, fine-tuning strategies, and evaluation of model outputs; integrated frontend and backend components and structured data workflows for secure access and efficient, database-driven operations.
- Compsoft Technology Solutions Group Inc.**  
Software Development Intern (Machine Learning)

India  
Aug 2022 – Sep 2022

  - Built and evaluated machine learning models in Python using TensorFlow, developing and experimenting in Jupyter Notebook on real-world datasets.
  - Developed a Voice Classification system using ML, covering audio data preprocessing, feature extraction, model training, and accuracy evaluation across classification categories.

## PROJECTS

- Loan Restructuring Platform**

2026

Java 21, Spring Boot, Apache Kafka, PostgreSQL, REST APIs

  - Designed and developed a Loan Restructuring orchestration service that consolidates multiple active loans into a single restructured loan, owning the end-to-end customer journey from eligibility to completion.
  - Built the Collection Loan Orchestrate Service as the central workflow orchestrator, maintaining the state and progression of every journey across user eligibility, consent, underwriting, disbursement, upfront fee payment, and final completion, with validated transitions that prevent invalid state changes.
  - Designed an event-driven architecture with Apache Kafka to orchestrate workflows across Analytics, Underwriting, Disbursement, Repayment, App, and Collection systems, reducing dependency on synchronous service-to-service communication.

- Defined inbound and outbound Kafka event flows with standardized event types, correlation IDs, event versioning, retry handling, and idempotent processing; hardened with Dead Letter Topics (DLT), structured logging, and end-to-end request correlation.
- Modelled PostgreSQL schemas for restructuring offers, workflow status, and audit tracking, and developed REST APIs consumed by the App via the Repayment Internal BFF for restructuring status and user consent.
- Owned the backend architecture and technical design — service design, database schema, Kafka architecture, API and event contracts — collaborating with six cross-functional teams to define integration boundaries.

### Waiver Management Service

2025

*Java 21, Spring Boot, Kafka, PostgreSQL, MySQL, Redis*

- Built and owned a microservice automating waiver management for overdue loan customers, enabling instant and agent-driven waivers on penalty and late charges.
- Designed a rule-driven waiver engine consumed by AI models and collection agents, contributing to a **60% increase in recovery rates**.
- Developed REST APIs and Kafka-based event-driven workflows for waiver eligibility, approval, and customer communication, integrating with CRM and loan management systems to reduce manual collection effort.

### Collection Loan Management System

2025

*Java 21, Spring Boot, Kafka, PostgreSQL, MySQL, Redis*

- Developed a core backend platform powering the end-to-end CRM and collections ecosystem for overdue loan customers, covering customer interactions, loan metadata, repayment tracking, and collection workflows.
- Built microservices with Kafka-based asynchronous communication and optimized high-volume data access using Redis caching and tuned relational queries, improving operational efficiency across the loan recovery lifecycle.

### AI-Powered Waiver Chatbot

2025

*Java, Spring Boot, REST APIs, Kafka, PostgreSQL, Redis, AWS, LLM Integration*

- Building an AI-powered chatbot that gives overdue loan customers instant waiver recommendations and personalized repayment support, with backend workflows integrating the chatbot into waiver, CRM, and loan management systems for real-time support and automated waiver decisions.

## ACHIEVEMENTS

- **Visionary Innovator Award, mPokket (Q1 FY26)** — recognized for delivering key backend enhancements for the Part Payment feature, playing a significant role in the Lift & Shift migration of the Collection Module, Admin API, and Salaried services, and contributing to a ~20% reduction in infrastructure cost, while ensuring a smooth and stable production rollout.
- Secured **2nd rank** in Bug Raid Conquest conducted by Seven Chats, demonstrating strong debugging, analytical thinking, and problem-solving skills.
- Solved **250+ coding problems** across multiple platforms, strengthening data structures and algorithms.
- Led and coordinated the final-year project team, managing collaboration, task allocation, and delivery of project milestones.

## EDUCATION

**B.E. in Computer Science and Engineering — CGPA 8.5**

*Visvesvaraya Technological University*

*Bengaluru, India*

*2019 – 2023*
